The shoring wall design is based on 3.28 ft (1 m) diameter secant piles installed at either 2.25 ft (690 mm) or 2.0 ft (610 mm) center-to-center spacing, depending upon the depth to bedrock. The design assumes that a verticality tolerance of

In secant pile walls, the axial distance of piles is smaller than their diameter. It is possible to divide the piles into two groups. Primary and secondary piles.

particularly suitable for excavations close to buildings, roads, and other sensitive structures. These retaining walls are formed by a series of interlocking drilled shafts and can be used where high water tables and/or unstable ground conditions occur. Secant walls are installed by high torque fixed mast rigs.
